Over the years, a large and growing literature on the economics of climate change has developed. Within this volume the contributors have included a wide range of journal essays that consider the impact of climate change on specific sectors; goods and services; the costs and benefits of greenhouse gas (GHG) mitigation; and policy design for mitigation, including both domestic instruments and issues related to international agreements.

Fairness and Futurity: Essays on Environmental Sustainability and Social Justice brings together leading international figures in political theory and sociology, as well as representatives from the political community, to consider the normative issues at stake in the relationship between environmental sustainability and social justice. It raises important questions and sets out to provide the answers. If future generations are owed justice, what should we bequeath them? Is 'sustainability' an appropriate medium for environmentalists to express their demands? Is environmental protection compatible with intra-generational justice? Is environmental sustainability a luxury when social peace has broken down? These essays emerged from three intensive seminars that involved participants in constant re-evaluations of their work, and which brought three distinct groups—environmental theorists, 'mainstream' political theorists, and policy community members—into fruitful contact. In particular, the attempt to involve 'mainstream' theorists in environmental questions, and to encourage environmentalists to use intellectual resources of political theory, should be highlighted.

This book constitutes the revised post-conference proceedings of the 16th European Conference on Multi-Agent Systems, EUMAS 2018, held at Bergen, Norway, in December 2018. The 18 full papers presented in this volume were carefully reviewed and selected from a total of 34 submissions. The papers report on both early and mature research and cover a wide range of topics in the field of multi-agent systems.

This book constitutes the proceedings of the 14th International Conference on Wireless Algorithms, Systems, and Applications, WASA 2019, held in Honolulu, HI, USA, in June 2019. The 43 full and 11 short papers presented were carefully reviewed and selected from 143 submissions. The papers deal with new ideas and recent advances in computer systems, wireless networks, distributed applications, and advanced algorithms that are pushing forward the new technologies for better information sharing, computer communication, and universal connected devices in various environments, especially in wireless networks.

An advanced treatment of modern macroeconomics, presented through a sequence of dynamic equilibrium models, with discussion of the implications for monetary and fiscal policy. This textbook offers an advanced treatment of modern macroeconomics, presented through a sequence of dynamic general equilibrium models based on intertemporal optimization on the part of economic agents. The book treats macroeconomics as applied and policy-oriented general equilibrium analysis, examining a number of models, each of which is suitable for investigating specific issues but may be unsuitable for others. After presenting a brief survey of the evolution of macroeconomics and the key facts about long-run economic growth and aggregate fluctuations, the book introduces the main elements of the intertemporal approach through a series of two-period competitive general equilibrium models—the simplest possible intertemporal models. This sets the stage for the remainder of the book, which presents models of economic growth, aggregate fluctuations, and monetary and fiscal policy. The text focuses on a full analysis of a limited number of key intertemporal models, which are stripped down to essentials so that students can focus on the dynamic properties of the models. Exercises encourage students to try their hands at solving versions of the dynamic models that define modern macroeconomics. Appendixes review the main mathematical techniques needed to analyze optimizing dynamic macroeconomic models. The book is suitable for advanced undergraduate and graduate students who have some knowledge of economic theory and mathematics for economists.

Create and maintain a successful social media strategy for your business Today, a large number of companies still don't have a strategic approach to social media. Others fail to calculate how effective they are at social media, one of the critical components of implementing any social media strategy. When companies start spending time and money on their social media efforts, they need to create an internal plan that everyone can understand. Maximize Your Social offers a clear vision of what businesses need to do to create—and execute upon—their social media for business road map. Explains the evolution of social media and the absolute necessity for creating a social media strategy Outlines preparation for, mechanics of, and maintenance of a successful social media strategy Author Neal Schaffer was named a Forbes Top 30 Social Media Power Influencer, is the creator of the AdAge Top 100 Global Marketing Blog, Windmill Networking, and a global social media speaker Maximize Your Social will guide you to mastery of social media marketing strategies, saving you from spending a chunk of your budget on a social media consultant. Follow Neal Schaffer's advice, and you'll be able to do it yourself—and do it right.

Makes Japanese sources accessible in English Although much of the work on Japanese economic history is inaccessible to Westerners, many of Japan's leading economic historians have published widely in English. Combined with the work of Western economists who can utilize Japanese-language sources, this series assembles a wide range of English-language articles on the key issues in Japanese economic development. Individual volumes cover the interwar period, postwar reconstruction and growth, the textile industry, demographics, agriculture, trade, and the rise of commerce and "protoindustry" in the Tokugawa era. An information-packed classroom and research resource An introductory essay in each volume discusses the significance of the articles, compares various economic development in Japan with those in other countries, and puts studies in the context of similar studies in Europe. A versatile research resource, this 7-volume set is a veritable gold mine of hard-to-find informationand data from diverse sources and a godsend to everyone interested in comparative economic and social history. Professors will appreciate the collection because it gives them instant access to less familiar English-language sources and is an easy way to introduce students to doing their own research. Students will appreciate the many articles as a mother lode of information for reports and papers. Researchers will be pleased by the coverage of more than three centuries of Japanese history and life.

This book constitutes the refereed proceedings, presented on the 20th International Conference on Web Information Systems Engineering, WISE 2019 and on The International Workshop on Web Information Systems in the Era of AI, held in Hong Kong and Macau, China. Due to the problems in Hong Kong, WISE 2019 has been postponed until January 2020. The 7 workshop papers, 5 demo papers and 3 tutorial papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in the following sections: tutorials; demos; the International Workshop on Web Information Systems in the Era of AI.

We generate and gather a lot of data about ourselves and others, some of it highly confidential. The collection, storage and use of this data is strictly regulated by laws, but restricting the use of data often limits the benefits which could be obtained from its analysis. Secure multi-party computation (SMC), a cryptographic technology, makes it possible to execute specific programs on confidential data while ensuring that no other sensitive information from the data is leaked. SMC has been the subject of academic study for more than 30 years, but first attempts to use it for actual computations in the early 2000s – although theoretically efficient – were initially not practicable. However, improvements in the situation have made possible the secure solving of even relatively large computational tasks. This book describes how many different computational tasks can be solved securely, yet efficiently. It describes how protocols can be combined to larger applications, and how the security-efficiency trade-offs of different components of an SMC application should be chosen. Many of the results described in this book were achieved as part of the project Usable and Efficient Secure Multi-party Computation (UaESMC), which was funded by the European Commission. The book will be of interest to all those whose work involves the secure analysis of confidential data.
