WASHINGTON — The U.S. Army continued its yearslong tradition of not funding the procurement of the latest variant of the CH-47F Chinook cargo ... vibration from the new Advanced Chinook Rotor Blades.

Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. Pages: 26. Chapters: Boeing CH-47 Chinook, Boeing Vertol CH-46 Sea Knight, Piasecki H-21, Boeing Vertol XCH-62, Piasecki HRP Rescuer, Piasecki H-25, Bristol Belvedere, Piasecki VZ-8 Airgeep, McCulloch MC-4, Yakovlev Yak-24, Bell HSL, Boeing Model 360, Tandem rotors, Piasecki H-16, Jovanovich JOV-3. Excerpt: The Boeing CH-47 Chinook is an American twin-engine, tandem rotor heavy-lift helicopter. Its top speed of 170 knots (196 mph, 315 km/h) is faster than contemporary utility and attack helicopters of the 1960s. It is one of the few aircraft of that era, such as the C-130 Hercules and the UH-1 Iroquois, that is still in production and front line service with over 1,179 built to date. Its primary roles include troop movement, artillery emplacement and battlefield resupply. It has a wide loading ramp at the rear of the fuselage and three external-cargo hooks. The Chinook was designed and initially produced by Boeing Vertol in the early 1960s. The helicopter is now produced by Boeing Rotorcraft Systems. Chinooks have been sold to 16 nations with the US Army and the Royal Air Force (see Boeing Chinook (UK variants)) being the largest users. The CH-47 is among the heaviest lifting Western helicopters. In late 1956, the United States Department of the Army announced plans to replace the CH-37 Mojave, which was powered by piston engines, with a new, turbine-powered helicopter. Turbine engines were also a key design feature of the smaller UH-1 "Huey" utility helicopter. Following a design competition, in September 1958, a joint Army-Air Force source selection board recommended that the Army procure the Vertol medium transport helicopter. However, funding for full-scale development was not then available, and the Army vacillated on its design requirements. Some in the Army aviation corps thought that the new helicopter should be a light...

The Boeing Vertol CH-47 Chinook heavy-lift helicopter has become an icon. Its tandem, contra-rotating rotors whirling above an aluminum fuselage punctuated by round porthole windows make this battlefield beast easily recognizable. Its status is owed to its long service life of more than 55 years. Experts predict its longevity will ultimately reach a century of service for heavy lift and use as a flying bus to deliver troops to the fight. This all-new volume explores the development and the U.S. military service of 13 models of Chinook from 1958 to date. Included is extensive coverage of the CH-47's use in Vietnam through Desert Storm and into current operations in Iraq and Afghanistan. Additional coverage is provided of the helicopters use during various disaster relief efforts in the United States and around the world. More than 160 archival color photos, augmented by 48 vintage black and white images and numerous line drawings, present a clear and concise illustrated history of this iconic helicopter.

Chapters: Sikorsky UH-60 Black Hawk, Boeing CH-47 Chinook, Bell OH-58 Kiowa, Eurocopter Tiger, NHIndustries NH90, AAI Corporation Aerosonde, Elbit Skylark. Excerpt: The Boeing CH-47 Chinook is a twin-engine, tandem rotor heavy-lift helicopter. Its top speed of 170 knots (196 mph, 315 km/h) was faster than contemporary utility and attack helicopters of the 1960s. It is one of the few aircraft of that era, such as the C-130 Hercules and the UH-1 Iroquois, that is still in production and front line service with over 1,179 built to date. Its primary roles include troop movement, artillery emplacement and battlefield resupply. It has a wide loading ramp at the rear of the fuselage and three external-cargo hooks. The Chinook was designed and initially produced by Boeing Vertol in the early 1960s. The helicopter is now produced by Boeing Rotorcraft Systems. Chinooks have been sold to 16 nations with the US Army and the Royal Air Force (see Boeing Chinook (UK variants)) being the largest users. The CH-47 is among the heaviest lifting Western helicopters. In late 1956, the Department of the Army announced plans to replace the CH-37 Mojave, which was powered by piston engines, with a new, turbine-powered helicopter. Turbine engines were also a key design feature of the smaller UH-1 "Huey" utility helicopter. Following a design competition, in September 1958, a joint Army-Air Force source selection board recommended that the Army procure the Vertol medium transport helicopter. However, funding for full-scale development was not then available, and the Army vacillated on its design requirements. Some in the Army aviation corps thought that the new helicopter should be a light tactical transport aimed at taking over the missions of the old piston-engined H-21 and H-34 helicopters, and consequently capable of carrying about fifteen...

Excerpt: The Boeing AH-64 Apache is a four-blade, twin-engine attack helicopter with a tailwheel-type landing gear arrangement, and a tandem cockpit for a two-man crew. Originally, the Apache started life as the Model 77 developed by Hughes Helicopters for the United States Army's Advanced Attack Helicopter program to replace the AH-1 Cobra, and was first flown on 30 September 1975. The AH-64 was introduced to U.S. Army service in April 1986. The AH-64 Apache features a nose-mounted sensor suite for target acquisition and night vision systems. It is armed with a 30-millimeter (1.2 in) M230 Chain Gun carried between the main landing gear, under...
