The Natural History (Latin: *Naturalis Historia*) is a work by Pliny the Elder. It is one of the largest single works to have survived from the Roman Empire to the modern day and purports to cover all ancient knowledge. The work's subject area is thus not limited to what is today understood by natural history; Pliny himself defines his scope as "the natural world, or life".

Palms are widely regarded as a model group for tropical research. More than 90% of the 2,600 species are restricted to tropical rain forests. Recent research on their long evolutionary history, stretching back more than 100 million years, has shed light on the origins, and processes underpinning the origins of the world's rain forests.

~~Evolution and diversification of the palms and their seed ...~~

Two *Prestoea montana* palm forest stands were studied in the Luquillo Experimental Forest over a period of 40 years in order to determine the successional status of the palm brake. The stand with the greater rainfall had fewer tree species, greater species dominance, and lower turnover of species than the stand with less rainfall.

E. J. H. Corner's perennial favorite, copiously stocked with now-classic botanical illustrations, is one of the most fascinating and original introductions to the world of plants ever produced. From the botanist to the amateur, no reader will finish this book without gaining a much richer understanding of plants, their history, and their relationship with the environments around them.
