In Shakespeare,  
Adaptation,

analyzes early  
adaptations of  
Shakespeare's plays  
in order to identify and  
illustrate how both  
social mores and  
basic human

psychology have changed in Anglo-American culture. Biberman contests the received wisdom that Shakespeare's characters reflect essentially timeless truths about human nature. To the contrary, he points out that Shakespeare's characters sometimes act and think in ways

that have become  
either stigmatized or  
simply outmoded.  
Through his study of  
the adaptations,  
Biberman pinpoints  
aspects of  
Shakespeare's  
thinking about  
behavior and  
psychology that no  
longer ring true  
because  
circumstances have

changed so

dramatically between  
his time and the time  
of the adaptation. He

shows how the  
adaptors' changes  
reveal key differences  
between

Shakespeare's  
culture and the culture  
that then supplanted  
it. These changes,  
once grasped, reveal  
retroactively some of

the ways in which  
Shakespeare's  
characters do not act  
and think as we might  
expect them to act  
and think. Thus  
Biberman counters  
Harold Bloom's claim  
that Shakespeare  
fundamentally invents  
our sense of the  
human; rather, he  
argues, our sense of  
the human is equally

bound up in the many ways that modern culture has come to resist or outright reject the behavior we see in Shakespeare's plays. Ultimately, our current sense of 'the human' is bound up not with the adoption of Shakespeare's psychology, perhaps, but its adaption-or, in psychoanalytic terms,

shows how in France,  
Shakespeare has  
been seen not as a

monarchy, but a man  
of the mob. French  
Theory thus helps us  
understand why  
Shakespeare's plays  
swing between  
violence and hope.  
Highlighting the  
recent religious turn in

Recognising them as such offers new readings of the plays, from the way memory becomes a weapon in Hamlet's Elsinore, to the pleasures and perils of Early Modern gift culture in Othello. The monograph illuminates Shakespeare's exploration of extended cognition,
